1. Business Requirements Document (BRD)

Executive Summary

The AI Career Intelligence Platform is designed to help job seekers analyze resumes, identify skill gaps, match relevant jobs, estimate salary ranges, and receive personalized learning recommendations through AI.

Business Problem

Candidates often rely on multiple disconnected tools for resume analysis, job search, and career planning.

Business Objectives

Provide an integrated AI-powered platform that improves career decision-making and interview readiness.

Stakeholders

Job seekers, administrators, recruiters (future), and platform maintainers.

Success Criteria

Accurate resume analysis, relevant job matching, responsive user experience, and scalable architecture.

2. Software Requirements Specification (SRS)

Functional Requirements

- User registration and login
- JWT authentication
- Resume upload (PDF/DOCX)
- Resume parsing and skill extraction
- Job recommendation engine
- Salary prediction
- Learning roadmap generation
- AI Career Assistant
- User dashboard

Non-Functional Requirements

- Secure authentication and authorization
- Responsive web application
- Scalable backend architecture
- Fast API response times
- Maintainable modular codebase

3. Product Scope

In Scope

- Resume Analysis
- Skill Gap Detection
- Job Matching
- Salary Prediction
- Learning Roadmap
- AI Career Assistant

Out of Scope (Version 1)

- Recruiter Portal
- Mobile App
- Video Interview Analysis
- ATS Integrations

Future Enhancements

- Resume Builder
- Mock Interviews
- Recruiter Dashboard
- Analytics
- Cover Letter Generator

Conclusion

This Project Initiation Document provides the initial business vision, software requirements, and product scope for the AI Career Intelligence Platform. It serves as the foundation for the detailed System Design Document and implementation phases.
