

AI Career Intelligence Platform

API Design Document

REST API • Swagger • Postman Collection • Authentication

Version: 1.0

Prepared By: Akshay Mohan

Table of Contents

- REST API Overview
- Core Endpoints
- Authentication
- Swagger
- Postman Collection
- Conclusion

1. REST API Overview

The backend exposes RESTful APIs built with FastAPI. All endpoints exchange JSON over HTTPS.

Method	Endpoint
POST	/api/auth/register
POST	/api/auth/login
POST	/api/resumes/upload
GET	/api/jobs/matches
GET	/api/salary/predict
POST	/api/learning/generate
POST	/api/chat

2. Authentication

- JWT Bearer Token authentication
- Passwords hashed using bcrypt
- Protected endpoints require Authorization: Bearer
- Role-based access for future admin features

3. Swagger Documentation

FastAPI automatically generates interactive API documentation.

Development URL: /docs

OpenAPI JSON: /openapi.json

4. Postman Collection

A Postman collection groups all endpoints for testing.

Folder	Requests
Authentication	Register, Login
Resume	Upload, Parse
Jobs	Match Jobs
Salary	Predict Salary
Learning	Generate Roadmap
AI Chat	Career Assistant

5. Conclusion

This document provides the initial API specification for the AI Career Intelligence Platform and serves as a reference for backend development and testing.
