

AI Career Intelligence Platform

User Guides

Installation Guide • Developer Guide • Administrator Guide

Version: 1.0

Prepared By: Akshay Mohan

Table of Contents

- 1. Installation Guide
- 2. Developer Guide
- 3. Administrator Guide
- 4. Conclusion

1. Installation Guide

Requirement	Details
Frontend	Next.js
Backend	FastAPI
Database	PostgreSQL
Cache	Redis
Container	Docker & Docker Compose

- Clone the Git repository.
- Configure environment variables (.env).
- Start services using Docker Compose.
- Verify backend and frontend are running.
- Create the initial administrator account.

2. Developer Guide

Area	Guideline
Coding Standards	PEP 8 (Python) and ESLint
Version Control	Git with feature branches
API Documentation	Swagger/OpenAPI
Testing	Run unit and integration tests
Code Review	Pull request approval before merge

Developers should follow the modular architecture, maintain documentation, and update migrations when database changes are introduced.

3. Administrator Guide

Task	Description
User Management	Create, update and disable accounts
System Monitoring	Review dashboards and alerts
Database Backup	Perform and verify scheduled backups
Application Updates	Deploy new releases through CI/CD
Security	Rotate secrets and review audit logs

Administrators are responsible for operational health, security monitoring, backup verification, and release management.

4. Conclusion

This document provides quick-start guidance for installing, developing, and administering Version 1.0 of the AI Career Intelligence Platform.
